Professional Summary

Full-stack web developer with nearly a decade of experience shipping production web applications across fintech, EdTech, logistics, and retail. Delivered systems used by over 10,000 users, drove a 40% traffic increase for clients, and built regulatory-compliant tools for Ghanaian financial institutions. Expert in Laravel, Livewire, WordPress, API design, and experience with Vue.js, React, and cloud infrastructure. Also an active tech educator who has trained 200+ students and facilitated national digital literacy programmes under Ghana's Digitalize Ghana initiative.

Work Experience

Full-Stack Developer · Arnson Innovate · Accra, Ghana *Mar 2021 – Present*

- Architected and delivered scalable full-stack applications using Laravel, Livewire, Vue.js, Tailwind CSS, and MySQL across multiple concurrent client projects, doubling the team's project delivery rate.
- Established reusable architecture and development standards that reduced time-to-launch for new client products, resulting in a 100% improvement in project delivery rate.
- Eliminated single points of failure in company infrastructure by setting up Oracle Cloud VPS instances, managing services via Coolify, and taking full ownership of SSL/TLS, domain management, and deployment pipelines.
- Helped 35+ client businesses rank on page one of Google by designing and launching responsive WordPress websites with targeted SEO strategies.
- Improved team collaboration and code reliability by introducing Git and GitHub workflows, while building and maintaining robust Laravel/MySQL backend systems with clean RESTful API design.
- Served as a technical bridge between clients and the development team, cutting requirement-to-build cycles significantly.

Web Developer · Emerging English Coaching · Akosombo, Ghana *May 2022 – Jan 2026*

- Helped the company achieve recognition as the top English learning platform in West Africa (2022) and Africa (2023) by building and maintaining its core website and e-learning tools.
- Drove a 40% increase in organic traffic through comprehensive SEO strategies, while improving system stability by 25% by resolving scripting issues, UI/UX problems, and security vulnerabilities.
- Expanded the platform's reach to students across Africa, Europe, and Asia by building and scaling web applications using JavaScript, WordPress, and WooCommerce.

Freelance Full-Stack Developer · Self-Employed · Selected Client Projects *2018 – Present*

- Built a hostel management system for the Superanation Hostel in the University of Cape Coast, serving over 10,000 users in production for two years; engineered secure web applications for Ghanaian financial institutions that cut manual reporting effort by over 90%.

- Brought a major Ghanaian bank headquarters into regulatory compliance by building an ORASS-integrated interface for submitting prudential returns to the Bank of Ghana.
- Launched multiple production systems including booking platforms, vehicle shipment trackers, utility payment tools, and subscription managers — all in active use by real customers.
- Integrated Paystack, Hubtel, Transflow/ITC Ghana, and Moolre payment gateways with full flows covering initiation, callbacks, verification, and receipt generation, alongside Brevo email and GiantSMS notifications.

IT Support Officer · Kwabre Rural Bank Head Office · Bono East, Ghana *Jun 2018 – Jul 2018*

- Configured and deployed thin client infrastructure across multiple bank branches serving over 5,000 clients; handled branch emergency IT requests and client-facing technology needs.

Key Projects

ORASS Integration — Bank of Ghana Ecosystem — *Laravel, Blade, Livewire, Alpine.js, MySQL, AWS S3*

- Built a regulatory compliance interface for a major Ghanaian bank covering secure API integration, document handling, data validation, and multi-user reporting dashboards.

LAutos — Vehicle Shipping Platform — *Laravel, Blade, Livewire, Alpine.js, Filament, Spatie Permissions, MySQL*

github.com/oheneadj/lautos

- Replaced a manual order process with a fully automated shipping platform featuring Google OAuth login, role-based access control, real-time tracking, Brevo email notifications, GiantSMS alerts, Sentry error monitoring, and automated deployments.

Subtrack — Subscription Tracker for Web Agencies — *Laravel, Blade, Livewire, Alpine.js, DomPDF, MySQL*

github.com/oheneadj/SubTrack

- Eliminated missed renewal deadlines by tracking client subscriptions, automating reminders via Laravel scheduled jobs, and generating professional USD-denominated PDF invoices with DomPDF.

Additional projects (SikaDaka, LDSGH, OpenStore, SaganPay, PodList) at ohene.dev and github.com/oheneadj.
